Semester: 6th Semester (Grey)**

Section 1: Introduction

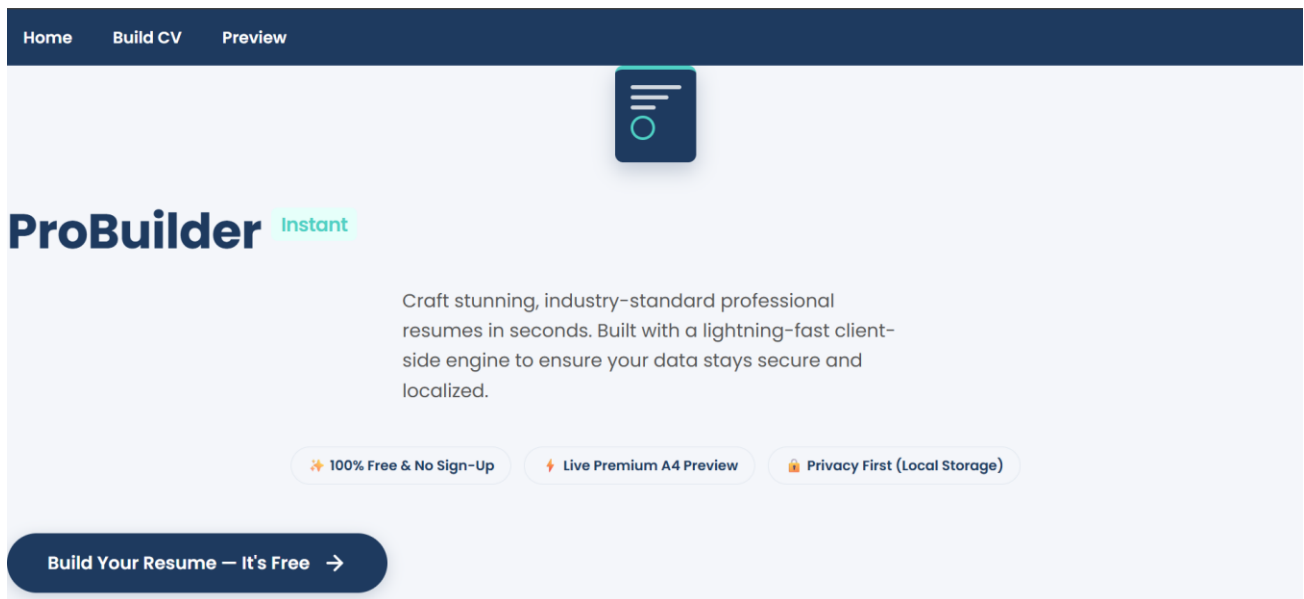

This project is a lightweight, high-performance Client-Side CV Builder Application. It allows users to create, preview, and export premium professional resumes in both PDF and Microsoft Word formats instantly without requiring any complex sign-ups.

Screen1: Home / Landing page

Heading: 3.1 Home / Landing Interface

Description: This is the entry point of the web application. It features a modern centered layout with quick feature tags showcasing data privacy (Local/Session Storage) and an instant Call-To-Action button to launch the builder workspace.

Screenshot:

Screen 2: CV Builder Workspace

Heading: 3.2 CV Workspace & Dynamic Input Forms

Description: The workspace provides structured dynamic forms where users input personal details and education background. It contains advanced functional components like dynamic '+ Add' and 'Remove' buttons to let users scale their Work Experience arrays and Professional Skills loops in real-time.

+ Add

Generate Full Premium PDF

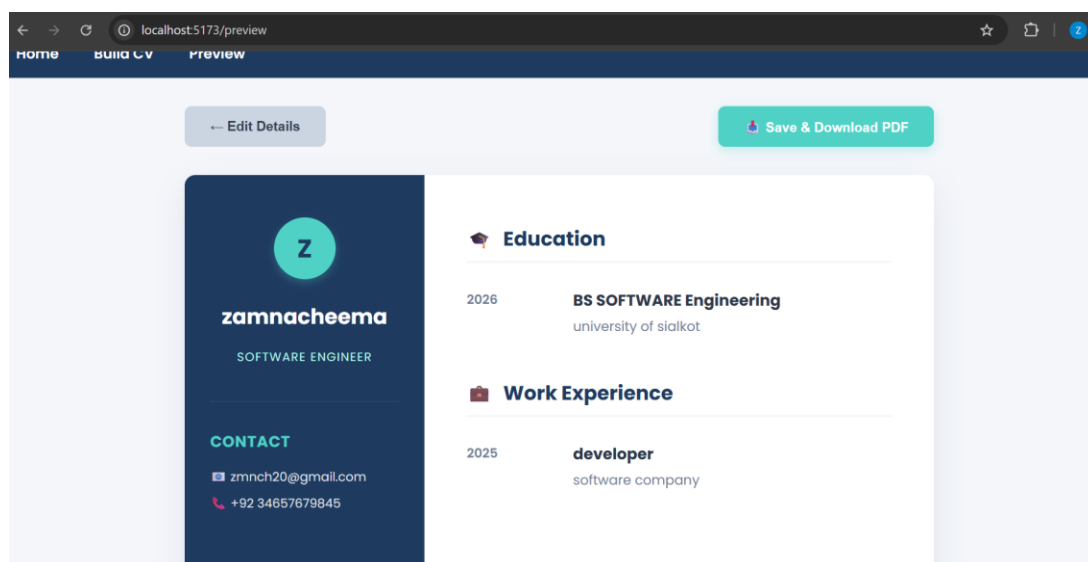

Point: Added an International Country Dialing Code Validation Engine using vue-tel-input. This enhancement enables real-time dropdown flag switching and structural parsing based on localized country standards.

Screen 3: Premium Live Preview

Heading: 3.3 Dynamic CV Preview Sheet

Description: After clicking 'Generate Full Premium PDF', the state commits to the Preview view. This interface presents a split-layout professional resume style. The upper action bar provides a non-print navigation system allowing users to safely return to edit fields without state loss, or proceed to official exports.

Screenshot:

Screen 4: Print to PDF / Export Engine

Heading: 3.4 Native Print Engine & PDF Compilation

Description: Utilizing strict CSS @media print rules, the navigation items are automatically hidden when the native browser print pipeline is active. This ensures the output PDF sheet remains 100% clean, standardized, and ready for official corporate usage.
